## **Vertical Multistage Pumps -AK Series**

AK FLOW high pressure pumps AVR, AVRF & AVRT with pumping pressure upto 280 meter and flow upto 120m<sup>3</sup>/h. All essential parts, such as shaft, impellers and intermediate chambers are made of fully stainless steel AISI 304 (W-Nr.1.43.01). On request the complete pump can be supplied in stainless steel or with higher grade stainless steel AISI 316 (W-Nr.1.44.01). Usually the pumps are equipped with mechanical seals tungsten carbide/carbon. Special seals are applied according to the pumping liquid. The pumps have got high efficiency.

## Performance Scope

The performance curve applies to the AVR, AVRF and AVRT version of the pump.

## Pump

AVR,AVRF,AVRT is a kind of vertical non-self priming multistage centrifugal pump, which is driven by a standard electric motor. The motor output shaft directly connects with the pump shaft through a coupling.

The pressure-resistant cylinder and flow passage components are fixed between pump head and in-and outlet section with tie-bar bolts. The inlet and outlet are located at the pump bottom at the same plane.

This kind of pump can be equipped with an intelligent protector to effectively prevent it from dry-running, out-of-phase and overload.

## Application

AVR,AVRF and AVRT pumps is a kind of multifunctional products. It can be used to convey various medium from tap water to industrial liquid at different temperature and with different flow rate and pressure.

AVR type is applicable to conveying non-corrosive liquid, while AVRT and AVRF is suitable for slightly corrosive liquid.

- Water supply: Water filter and transport in Waterworks, boosting of main pipeline, boosting in high-rise buildings.
- Industrial boosting: Process flow water system, cleaning system, high-pressure washing system, fire fighting system
- Industrial liquid conveying: Cooling and air-conditioning system, boiler water supply and condensing system, machine-associated purpose, acids and alkali
- Water treatment: Ultrafiltration system, reverse osmosis system, distillation system, separator, swimming pool
- Irrigation: Farmland irrigation, spray irrigation, dripping irrigation

## Operation condition

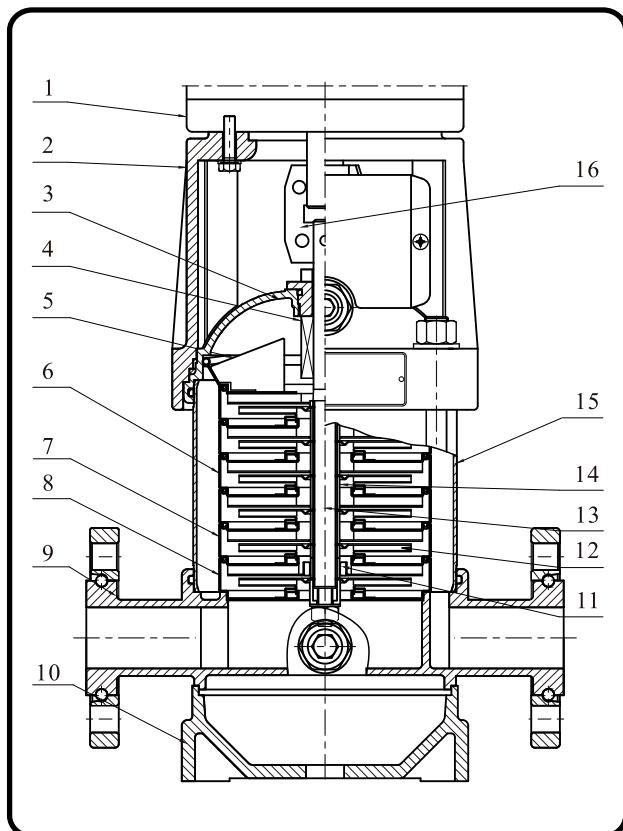

- Thin, clean, non-flammable and non-explosive liquid containing no solid granules and fibers.
- Liquid temperature:  
Normal temperature type: -15°C ~ +70°C,  
Hot water type: +70°C ~ +120°C
- Ambient temperature: up to +52°C
- Altitude: up to 1000m

## Electric motor

The pump is fitted with a totally enclosed , fan cooled squirrel-cage 2 pole motor.

- Protection class: IP55
- Insulation class: F
- Standard voltage, 50Hz:  
1x220-230/240V  
3x200-220 / 346-380V  
3x220-240 / 380-415V  
3x380-415V

## Limitation of pressure and temperature

The following figure shows the limitation of pressure and temperature, which shall be kept within the region as shown in the figure.

## Performance Curves

Conditions for the performance curves:

1. All the performance curves are based on the measured values of a motor 3x380V ~ 415V at a constant speed of 2900 rpm.
2. Curve tolerance in conformity with ISO9906, appendix A.
3. Measurement is done with 20 °C air-free water, kinematic viscosity of 1mm²/sec.
4. The operation of pump shall refer to the performance region indicated by the thickened curve to prevent overheating due to too small flow rate or overload of motor due to too large flow rate.

## Minimum inlet pressure NPSH

In case that the pressure in pump is lower than the steam pressure used to convey liquid, the cavitations will occur. To avoid cavitations, a minimum pressure at the inlet side of the pump shall be guaranteed. The maximum suction stroke can be calculated with following formula:

$$H = Pb \times 10.2 - NPSH - Hf - Hv - Hs$$

Pb = atmosphere pressure [bar] (can be set as 1bar)

In a closed system, Pb means system pressure [bar]

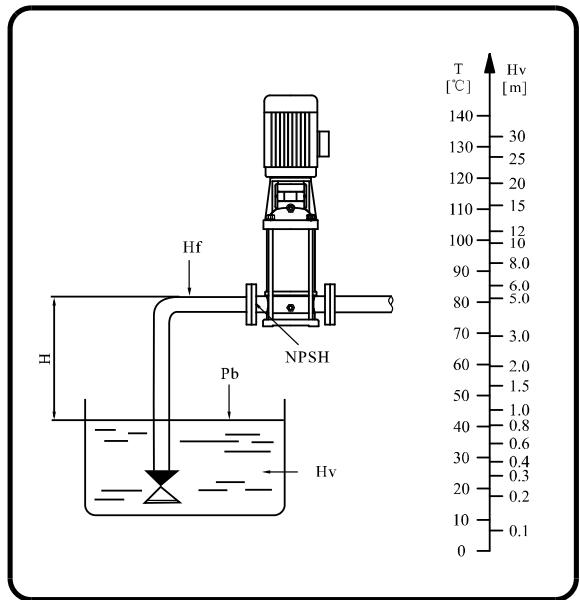

NPSH= Net positive suction head [m], It can be read out from the point of possible max. flow rate shown on NPSH curve

Hf = Pipeline loss at the inlet [m]

Hv = Steam pressure [m]

Hs = Safety margin Minimum 0.5m delivery head

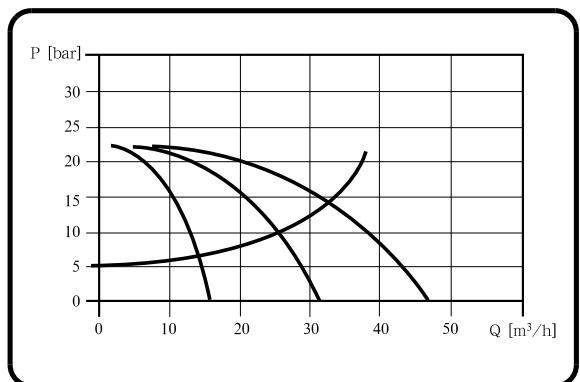

If the calculated result H is positive, the pump may run under the max. suction stroke H. In case the calculated result H is negative, a delivery head of min. inlet pressure is necessary.

Check and ensure that the pump is not at cavitation state.

## Operation in parallel

- Connecting several pumps in a parallel running mode will benefit the reliability of the system compared to a single pump system.
- Applicable to different working states required by a variable flow system.
- Increasing the availability of water supply if a pump fails: only a part of the system flow is effected.

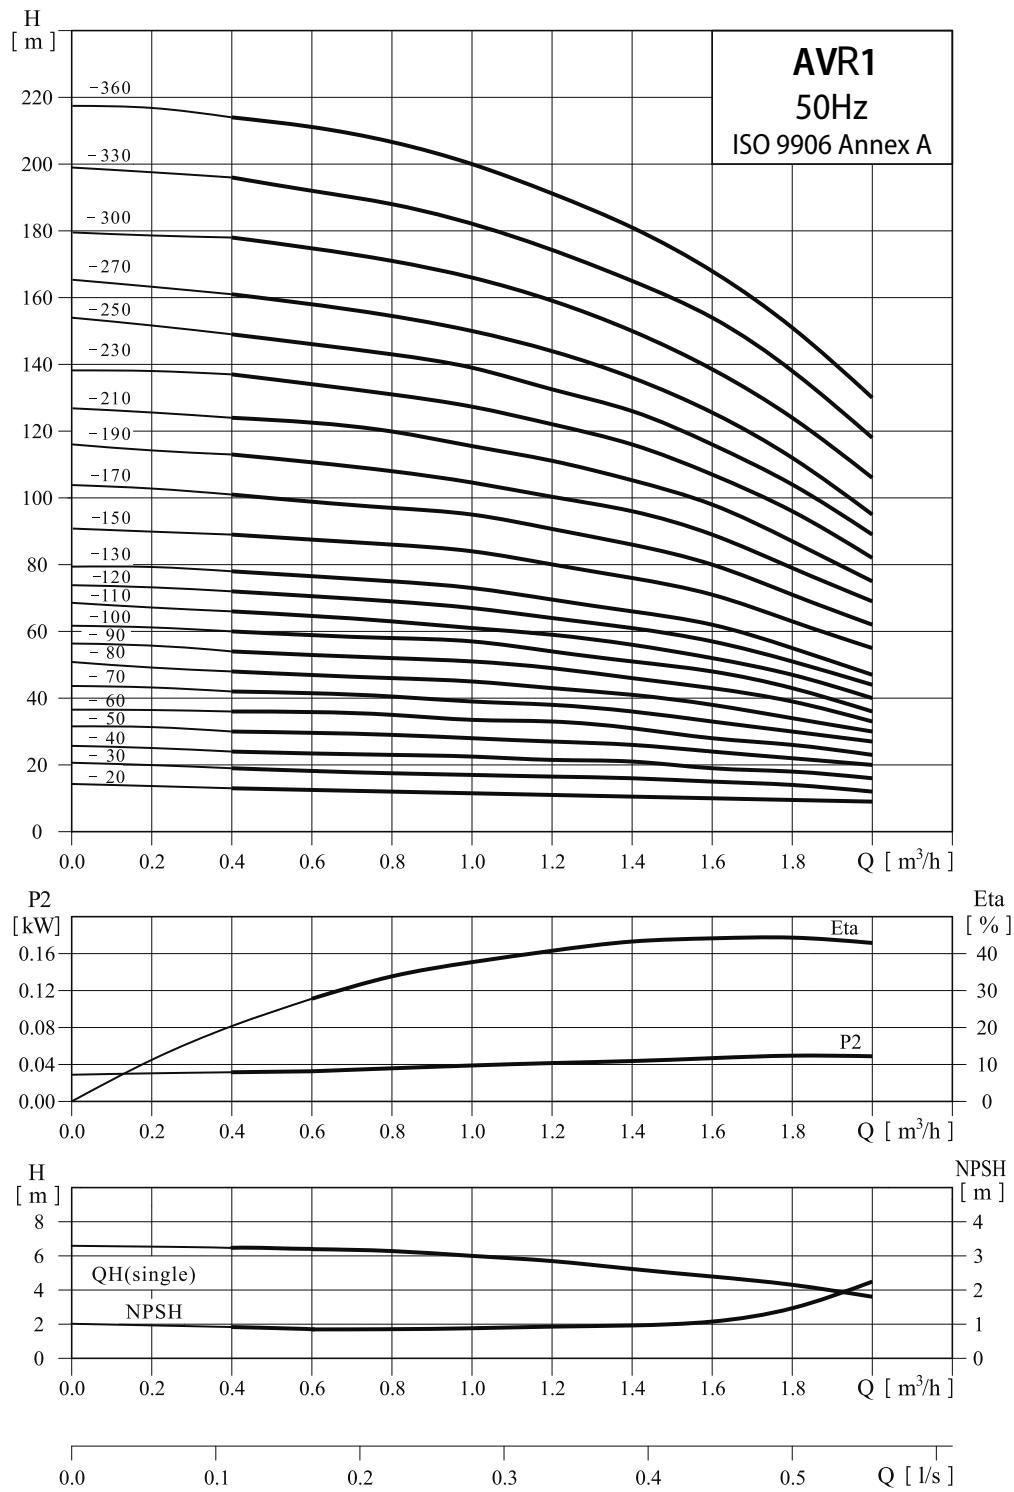

Two pumps or more can be connected in parallel running if necessary.

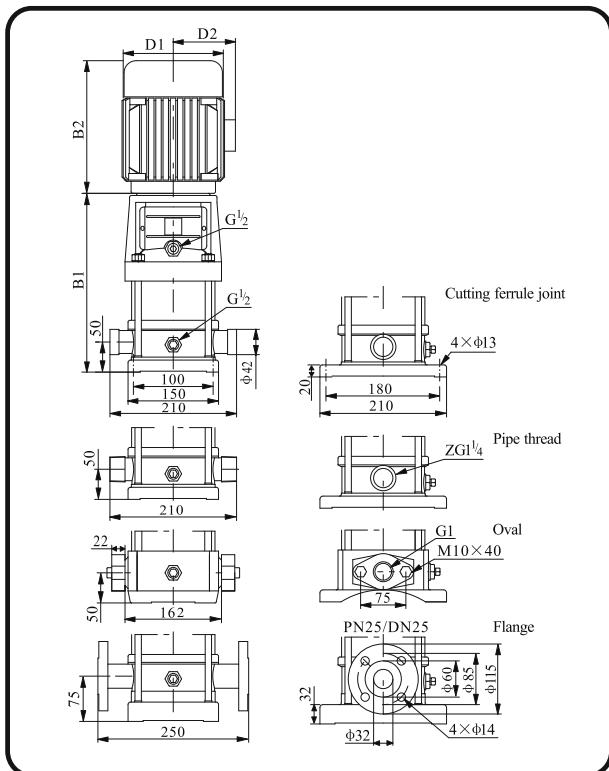

# AVR1 /AVRF1 / AVRT1

## Performance Curves

The performance curve applies to the AVR,AVRF and AVRT version of the pump.

# AVR150 / AVRF150 / AVRT150

## Performance Curves

The performance curve applies to the AVR, AVRF and AVRT version of the pump.

## Dimensional sketch

## Dimensions and Weight

Model	Size [mm]					Weight [kg]
	B1	B2	B1+B2	D1	D2	
AVR 150-10-1	840	490	1330	330	255	
AVR 150-10	840	490	1330	330	255	
AVR 150-20-2	1000	2550	1550	330	255	
AVR 150-20-1	1000	2590	1590	360	285	
AVR 150-30	660	1660	400	310	350	
AVR 150-30-2	1160	3660	1820	400	310	
AVR 150-30-1	1160	3660	1820	400	310	
AVR 150-40	660	1820	400	310	385	
AVR 150-40-2	1320	780	2020	460	340	
AVR 150-40-1	1320	780	2020	460	340	
AVR 150-50	770	2120	540	370	560	
AVR 150-50-2	1510	370	2280	540	370	
AVR 150-50-1	1510	695	2355	580	410	
AVR 150-60	845	2355	580	410	690	
AVR 150-60-2	1670	785	2515	580	410	
AVR 150-60-1	1670	785	2515	580	410	
AVR 150-70	845	2515	580	410	700	

Remark: The provider data in the tables and sketches apply to the AVR,AVRF and AVRT version of the pump.

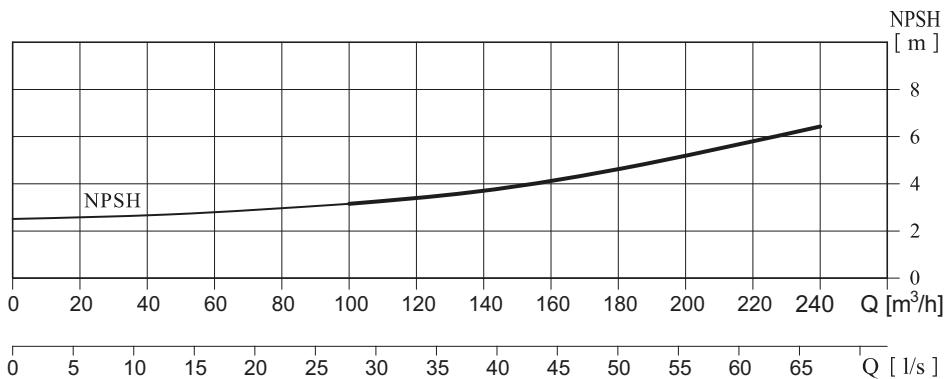

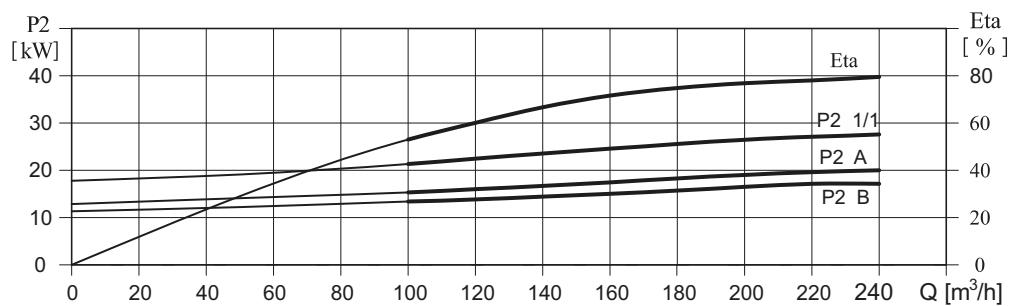

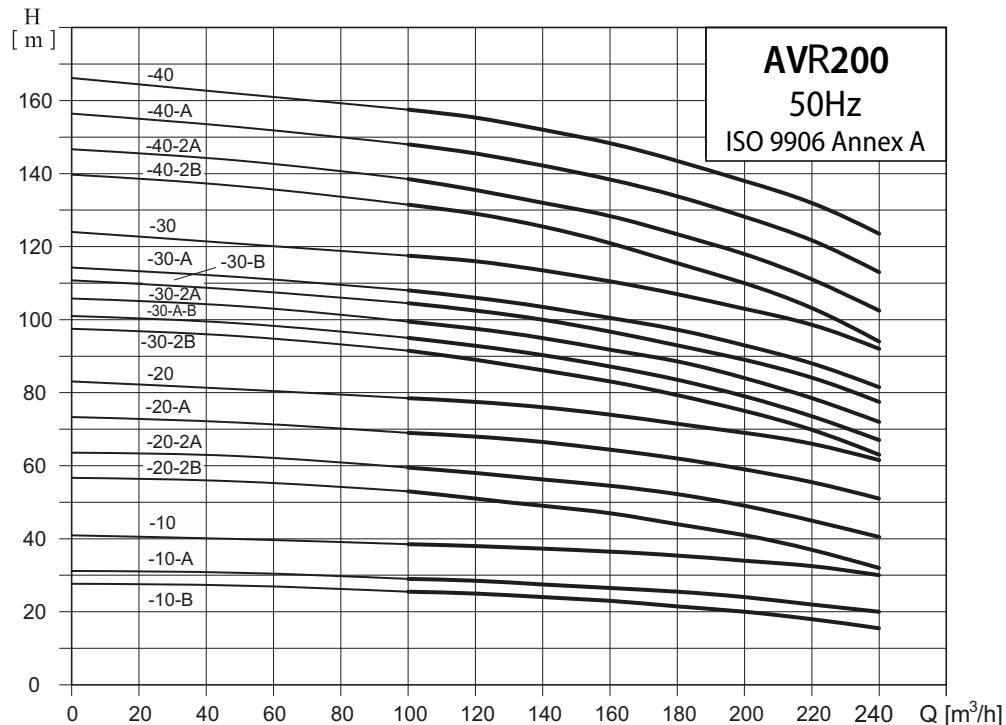

## Performance table

Model	Motor [kW]	Q [m³/h]	80	90	100	110	120	130	140	150	160	170
